

ADAPTIVE SOFTWARE ENGINEERING (ASE) COURSE PROJECT SUBMISSION

PROJECT TITLE:

Context-Aware Self-Healing Distributed Systems Using Generative Graph Neural Networks for
Dynamic Fault Remediation

Course Coordinator: G.Lavanya

TEAM DETAILS & ROLE ALLOCATION:

Member 1 (AI Architect):

- Name: Ch. Aditya
- Roll Number: 2420030669

Member 2 (Telemetry & Knowledge Base Lead):

- Name: A. Aaryan
- Roll Number / Student ID: 2420090098

Member 3 (Control Loop & Actuation Engineer):

- Name: K. Gokul
- Roll Number: 2420030716

Member 4 (Chaos Engineering & Benchmark Lead):

- Name: Nishanth
- Roll Number: 2420030679

PROJECT ABSTRACT

TITLE:

Context-Aware Self-Healing Distributed Systems Using Generative Graph Neural Networks for Dynamic Fault Remediation

ABSTRACT:

Modern distributed architectures face rapid cascading failures that static rule-based monitoring cannot efficiently isolate. This project introduces an autonomous self-healing framework driven by Generative Graph Neural Networks (GNNs) integrated into a MAPE-K control loop. Telemetry and service dependencies are modelled as dynamic spatio-temporal graphs. A Generative Graph Autoencoder detects structural anomalies, reconstructs baseline topologies, and synthesizes context-aware remediation workflows—including automated traffic rerouting and dynamic node isolation. Evaluated under synthetic chaos benchmarks, the system significantly reduces Mean Time to Remediation (MTTR) and prevents cascading system downtime.

KEYWORDS:

Self-Healing Systems, Generative GNNs, MAPE-K Loop, Fault Remediation, Distributed Systems.
